# The Rocky Road Game 

## Materials:

- 2-3 players
- Rock Playing Pieces
- The Playing Board
- Question Cards
- A Die

Object of the Game: This is a race board game in which players move along the path of the rock cycle. The path for The Rocky Road Game is divided into 3 colors corresponding to the 3 rock categories - igneous is red, sedimentary is blue, and metamorphic is green.

## The Rules:

1. Each player selects a rock as a playing piece and places their rock on "Start."
2. Each player rolls the die \& the player with the highest number goes first.
3. The questions and their answers are on the same card, so the player whose turn it is should not read their own question card. The next player on the right will be the question reader.
4. Once a question is read, the player has up to 30 seconds in which to answer.
5. If the player answers correctly before time runs out, he/she is to roll the die and advance the number of spaces indicated by the die.
6. If the player answers incorrectly, he/she is to roll the die and move backwards the number of spaces indicated by the die. No one moves backwards further than the "Start" space.
7. Next, the player to the right takes his/her turn. The question reader should also shift to the right.

## Notes on the Rules:

- The object of the game is to reach "Finish" and the first player to do so wins the game. Players do NOT need to have the exact number of spaces to hit the "Finish" space.
- Each player attempts only one question per turn.
- The question reader draws cards from the top of the question pile and returns them to the bottom of the pile.
- If the player lands on a space with directions, he/she completes those directions before the next person takes his/her turn. This applies to both forward and backward movement.
- If players land on a detour space, they MUST take that path.
- At "Process Point," players can move in either direction.
- Where "Submergence Subway" and "Crystallization Crossway" intersect, players must stay on their current path and may not cross over to another path.

Variation: To enable play by the whole class, the teacher can take the role of the question reader. Students can be divided into 2 or 3 large teams. The game board can be posted or projected on the wall.
